

COSMETICS CONTAINER

ABSTRACT

5 A cosmetics container includes a hollow
container and a cover unit. The cover unit is
composed of a connecting cover, a brush, a
revolving base and a revolving cover. The brush
is normally positioned in the connecting cover of
10 the cover unit. To do makeup, the revolving
cover is turned around to move forward together
with the revolving base, and simultaneously the
brush is rotated together to move forward and
extend out of the cover unit. Thus, a user can do
15 makeup with the brush, which can tinge the
cosmetics in the container.
